

TensorTech EcoCrib facing offers an aesthetically pleasing and durable facing at Edinburgh Airport

Walls and Slopes
Nº 458

Edinburgh Airport

📍 Scotland, UK

CONSTRUCTED IN 2022

Benefits

Environmentally friendly

100% recyclable and 100% manufactured from UK waste polymer

Resistance to weather conditions

with TensorTech EcoCrib

120 year design life

is available

No maintenance is required

with TensorTech EcoCrib

TensorTech EcoCrib provides efficiency and aesthetics

A retaining wall was required as part of the build for a new executive lounge for private jets at Edinburgh airport.

CLIENT'S CHALLENGE

The client required a retaining wall to create space for a new lounge building and the original plan was to use a standard timber crib system.

TENSOR SOLUTION

The installer identified the environmental and durability benefits of using TensorTech® EcoCrib™ and this Tensor solution was selected. By specifying the TensorTech EcoCrib System, engineers gain a crib wall facing which provides an aesthetically pleasing alternative to a timber finish, whilst stability of the structure is provided by the geogrid reinforced soil mass.
